

Serial No.: 10/759,790

Attorney Docket No.: 2000P09085US01----

**REMARKS**

Upon entry of the instant amendment, claims 15-19 and 21-25 are pending. Claims 14 and 20 have been canceled. Claim 15 has been amended to more particularly point out applicants' invention.

Claims 14-17, 19-23, and 25 have been rejected under 35 U.S.C. 102(b) as being anticipated by Goldman et al., EP Patent Publication No. 0 588 101 A2 ("Goldman"). In order for there to be anticipation, each and every element of the claimed invention must be present in a single prior reference. Applicants respectfully submit that the claimed invention is not taught, suggested, or implied by Goldman.

As described in the Specification, one aspect of the present invention relates to recording caller ID information in association with an answering machine and transmitting it to a remote location, such as at a call control system local to a retrieving party, to allow making a call to that number. More particularly, caller ID information can be transmitted to a remote location when an answering machine is accessed remotely.

Thus, claim 15 has been amended to recite "a call control system local to a caller calling the system and configured to receive the transmitted Caller ID data; wherein said call control system includes a Caller ID storage and retrieval unit configured to cause a number corresponding to received Caller ID data to be called by said call control system;" and claim 21 recites "wherein said transmitting comprises transmitting the recorded Caller ID data to an apparatus in a call control system wherein said call control system includes a Caller ID storage and retrieval unit configured to cause a number corresponding to received Caller ID data to be called by said call control system."

In contrast, while Goldman apparently transfers an ANI number to a caller as a header in a voice message retrieval message, the message header number does not appear to be used to call back the corresponding number. Instead, the ANI number is separately transferred to a "Callback Number register 80" which is then used by the local PBX to "transfer" the call to the calling in party. (See, Col. 17, lines 3-11). The

Attorney Docket No.: 2000P09085US01

remotely transferred number, however, is not itself used to call back the message leaving party. Moreover, Goldman does not provide a remote call control system, as generally recited in the claims at issue. As such, the Examiner is respectfully requested to reconsider and withdraw the rejection.

Claims 18 and 24 were rejected under 35 U.S.C. 103(a) as being unpatentable over Goldman in view of Kang et al., U.S. Patent No. 6,094,075 ("Kang"). Applicants respectfully submit that the claimed invention is not taught, suggested, or implied by Goldman or Kang, either singly or in combination. Goldman has been discussed above. Kang is relied on for allegedly teaching the "nifty feature" of a wireless carrier system. However, like Goldman, Kang fails to teach, suggest or imply a remote call control system or use of the transferred number to make the return call, as generally recited in the claims at issue. As such, the Examiner is respectfully requested to reconsider and withdraw the rejection

Applicants respectfully submit that the application is in condition for allowance, which allowance is earnestly solicited.

Date: 24 Jan. 07

Respectfully submitted,
